

PUBLIC TRADING REPORT

We previously announced a public investment experiment when we publish our investment positions in real-time. This was announced on June 22, 2021. The first report was published in early August 2021 and showed the following financial indicators: profit factor 2.14, profitability 15.73%. This is the next, second public report with a complete listing of NYSE stock options trades that were previously posted live on our website at <http://llc.universum.credit>. We have forwarded our investment positions to our Telegram @universum1 group and LinkedIn page <https://www.linkedin.com/company/universum-credit-llc>. Since that time, we have not had any other transactions in other markets known as hedging positions. Moreover, we did not trade any underlying assets, because a stock options trading is the main specialization of our Company. We are publishing this report to be transparent and open to our new clients as we continually seek funds to increase our working capital. If you have any questions, please contact us directly by email info@universum.credit

COMPLETE LISTING of NYSE STOCK OPTIONS TRADING (01-Aug-2021 – 28-Sep-2021)
